

## DALLAS CONVENTION CENTER EXPANSION and RENOVATION 2002 PROJECT

Dybala and Wurtz

Construction is progressing on this \$128 million project. This is one project with two components. The 203,00 square foot exhibit hall expansion is elevated over the City street system as well as commuter and freight railroad lines which bisect the site. When completed in Fall 2002, it will be the largest singular column free exhibit hall in the world. The second component renovates the current plaza on the north side of the 1973 exhibit halls to provide an image entry/arrival area. This includes lobby space escalating up to a new connector and pre-function space extending 900 feet in length unifying the convention center's exhibit hall space.
