Emancipatory Oceanic Macro-engineering:
A “New Atlantis”
in 21st Century Tunisia-Algeria?

Abstract

This report examines the modern-day prospects for the re-creation of an ancient North African lagoon. If dredged, it may solve several economic and geopolitical macro-problems: it will open the arid interiors of Tunisia and Algeria and humidify its atmospheric boundary layer, it will prove or disprove an old historical theory, and it may serve to retard the global rise of sea-level, whatever its cause.
